

# BLACK SHEEP

## *Sheeps Fescue*

**Uses:** BLACK SHEEP can offer several options both on the golf course and in general, natural low maintenance turf areas. It thrives in management programs, which emphasize low nitrogen fertilization (1–2 lbs. N/year), little or no irrigation water, and less mowing. It is ideal for a secondary rough, and in areas where secondary roughs transit into out of bounds or natural areas. With low fertilizer and water inputs, a mowing at the seed head extension period (Mid-May – Mid-June) is often the only mowing required as the fescue will settle in at a 3–6" height. A non-aggressive grass, BLACK SHEEP is the preferred choice in mixtures with Wildflowers or as a cool season nurse grass for warm season native grasses. Use in mixtures such as our "Highland Links" mixture for a Scottish or Irish links affect of fine textured roughs "blowing in the wind." BLACK SHEEP will not tolerate heavy traffic.

**Geographical Adaptation:** Best from the transition zone and North. Can be utilized in many northern areas of the prairie, the Intermountain States as well as the Pacific Coast states.

**Features:** BLACK SHEEP exhibits Fine texture, drought tolerance, in sun or shade.

**Production Areas:** Washington, Oregon

**Rate:** Overseeding 3–5 lbs./1,000 Sq. Ft.  
New Seeding 4–5 lbs./1,000 Sq. Ft.
