

# NEW CENTURY

## *Perennial Ryegrass Blend*

- **40% Splendid Perennial Ryegrass**
- **30% Inspire Perennial Ryegrass**
- **30% Gallery Perennial Ryegrass**

**Seasonal varietal substitutions may also include the following based on availability: Majesty, Divine, Ascend, Summerset, Courage and/or Pentium (all top performing).**

**Uses:** The uses of this “best” 3-way Perennial Ryegrass mixture are endless due to the speed of establishment and the dark green, low growing qualities of the newer perennial ryegrasses. The adapted area for long-lived straight stands of perennial ryegrass is limited to the Pacific Northwest and ocean moderated areas of the Northeast. Elsewhere it is a 1–5 year “fix” that produces excellent turf quality. In southern areas, perennial ryegrass is the standard for over seeding during the winter months. This mix will do an excellent job in either new construction or overseeding, especially when compared to mixes using common or lower performing types. Turf Managers, Contractors and Municipalities can receive excellent performance at a good value.

**Geographical Adaption:** From the northern portion of the transition zone, north throughout the cool season turfgrass zone. Perennial ryegrass is equally at home over seeded into Bermuda grass for beautiful winter turf in southern climates.

**Features:** All three varieties are low growing, dense and dark green. Additionally, they were all ranked in the top performance grouping in the 2001 NTEP data, (Schedule A [www.ntep.org](http://www.ntep.org)). Many of our mixes are 99% pure or more due to the absence of annual rye in the crop component. NEW CENTURY Perennial Ryegrass Blend is suitable for all high quality perennial ryegrass seedings where only the best available quality and performance is acceptable.

**Rate:** Overseeding: 2–14 lbs/1,000 Sq. Ft  
New Seeding: 4–7 lbs/1,000 Sq. Ft
