

# RAVEN

## *Kentucky Bluegrass*

***Consistent performer, medium texture, medium density, medium low growth, good value for overseeding roughs. Widely adaptable, a good blender, and good disease resistance.***

### **(BVMG TYPE)**

**Uses:** A valuable choice for over seeding and new construction of premium Bluegrass with moderate cost. RAVEN can be used as a dense, attractive first cut rough component to contrast Bentgrass fairways. This is an excellent choice for over seeding of moderate to high maintenance Bluegrass athletic fields. When used in a program of high fertility and managed soil P.H., it will spread and withstand cleat wear, traffic and mechanical damage. As a "BVMG type", RAVEN can facilitate genetic breadth in bluegrass blends by using 3 or 4 "types" as grouped by Rutgers University in yearly updated categories.

**Geographical Adaptation:** RAVEN will thrive throughout the range of Kentucky bluegrasses adaptation. Due to its strong genetic breadth it has adaptability in the Northern quarter of the transition zone under appropriate management.

**Features:** RAVEN features density, and offers rhizomatous repair of damaged areas for the customer who unquestionably wants the highest quality obtainable. Much better turfgrass quality than common and common type Kentucky bluegrasses.

**Production Areas:** Washington, Oregon, Idaho

**Rate:** Overseeding: 2–3 lbs./1,000 Sq. Ft.  
New Seeding: 2.5–3.5 lbs./1,000 Sq. Ft.
