

# SERENE

## *Kentucky Bluegrass*

***Excellent wear tolerance, good shade tolerance, stronger-wider blades than common types, attractive medium color, highly rated disease resistance, excellent spring density, widely adaptable. Tolerates lower mowing heights.***

### (CHERI TYPE)

**Uses:** A best-choice for over seeding and new construction of premium Bluegrass fairways and tees, commercial turf, lawns and athletic fields. SERENE can be used as a dense, attractive first cut rough to contrast Bentgrass fairways. This is an excellent choice for over seeding of high maintenance Bluegrass athletic fields. When used in a program of high fertility and managed soil P.H., it will spread and withstand cleat wear, traffic and mechanical damage. As a "Cheri type" characterized by excellent turf quality overall, SERENE is a solid choice when spreading the genetic base of bluegrass by utilizing 3 or 4 "types" as grouped by Rutgers University in yearly updated categories.

**Geographical Adaptation:** SERENE will thrive throughout the range of Kentucky bluegrasses adaptation. Due to its strong genetic breadth it has adaptability in the Northern quarter of the transition zone under appropriate management.

**Features:** SERENE features density, and offers rhizomatous repair of damaged areas for the customer who unquestionably wants the highest quality obtainable. Top performer and suitable for "low-mow" applications.

MD/VA RECOMMENDED CULTIVAR.

**Production Areas:** Washington, Oregon, Idaho

**Rate:** Overseeding: 2–3 lbs./1,000 Sq. Ft.  
New Seeding: 2.5–3.5 lbs./1,000 Sq. Ft.
