

JEFFERSON

Kentucky Bluegrass

Outstanding spring green up and strong seedling vigor, drought tolerant, Maintains excellent mowing quality at all mowing heights and throughout seasons, shows least seed head/steaminess of any variety currently on the market. Fine textured, widely adaptable, highly rated disease resistance. A true "elite" variety.

(CELA TYPE)

Uses: A best choice for over seeding and new construction of premium Bluegrass. JEFFERSON also can be used as a dense, attractive first cut rough to contrast Bentgrass fairways. This is an excellent choice for over seeding of high maintenance Bluegrass athletic fields, commercial turf, tees and fairways, and home lawns. When used in a program of optimum fertility and managed soil P.H., it will spread and withstand wear, traffic and mechanical damage. As a "Cela type", JEFFERSON can facilitate genetic breadth in bluegrass blends by using 3 or 4 "types" as grouped by Rutgers University in yearly updated categories.

Geographical Adaptation: JEFFERSON will thrive throughout the range of Kentucky bluegrasses adaptation. It has adaptability in the Northern quarter of the transition zone under appropriate management.

Features: JEFFERSON features density, and offers rhizomatous repair of damaged areas for the customer who unquestionably wants the highest quality obtainable. Suitable for "low-mow" applications.

MD/VA RECOMMENDED CULTIVAR.

Production Areas: Washington, Oregon, Idaho

Rate: Overseeding: 2–3 lbs./1,000 Sq. Ft.
New Seeding: 2.5–3.5 lbs./1,000 Sq. Ft.
