

BLUE MAX

Kentucky Bluegrass

Very Dark Green "Elite" variety for Golf, Sod and other fine turf. Dense, compact, lateral growth habit. Strong-wider leaf blades similar to Serene and Abbey. Tolerates lower mowing heights.

(COMPACT TYPE)

Uses: An "Elite"-choice for sod production, over seeding and new construction of PREMIUM Bluegrass turf. BLUE MAX can be used as a dense, attractive first cut rough component to contrast Bentgrass fairways. This is an excellent choice for over seeding of moderate to high maintenance bluegrass athletic fields, commercial landscapes, lawns and golf course roughs. When used in a program of optimum fertility and managed soil P.H., it will spread and withstand cleat wear, traffic and mechanical damage. As a "Compact type", BLUE MAX is invaluable in broadening the genetic base of bluegrass blends and can facilitate genetic breadth in bluegrass blends by using 3 or 4 "types" as grouped by Rutgers University in yearly updated categories..

Geographical Adaptation: BLUE MAX will thrive throughout the range of Kentucky bluegrasses adaptation. It has adaptability in the Northern quarter of the transition zone under appropriate management.

Features: BLUE MAX features density, compact growth and offers rhizomatous repair of damaged areas for the customer who unquestionably wants the highest quality obtainable. Blue Max provides good resistance to leaf spot and excellent drought tolerance along with leaf spot and summer patch resistance. Suitable for "low-mow" applications.

MD/VA RECOMMENDED CULTIVAR.

Production Areas: Washington, Oregon, Idaho

Rate: Overseeding: 2–3 lbs./1,000 Sq. Ft.
New Seeding: 2.5 – 3.5 lbs./1,000 Sq. Ft.
